

Children's Hospital Emergency

Emergency works in other to providing critical health care for patients in 24 hours.

The main function of EMS, is the treatment of patients that suffer from a serious patient that it's no fast treatment leading to serious complications.

- Emergency scientific supervisor: Dr. Javad Ahmadyan

- Ward nurse: Ms. Khodadadeh

- Beds :35 beds equipped with side rail and 8 Exercises

Triage unit: in this unit in order to provide emergency services for patients is established in 24 hours.

The patients that need immediate attention, first of all are being investigated

Emergency unit cures patient according to clinical needs and in order to medical emergency, not necessarily according to arrange emergency room.

All patients including: surgery – blood – nerves – nephrology – lung – digestion – Rheumatology – glands – Immunology – infection – neonatology -EMS (emergency) of this unit wishing the immediate healing for your child in order to meet your beloved with process of operation of this unit so, the following will inform you:

- 1) Refer to Triage unit for initial review by Triage nurse and determine clinical status.
- 2) Refer to acceptance unit (to file) after determine clinical status.
- 3) visit the doctor for check clinical assessment

-if there are any life – threatening symptoms after Triage, immediately transfer to CPR room and urgent actions is taken for patients.

4) Treatment by resident physician and if you need special service, take action by specialized service.

In order to prevent integration and maintain finally patient's safety and better care for patients., just child's parents are allowed to be beside patient.

If it's necessary to take X-rays (radiography) or doing experiment on him / her and see a child sub specialist, maybe you should wait longer.

If the child is not hospitalized, please follow – up answered test personally from emergency and show the result to emergency doctor.

If the hospitalization is not necessary, child will be discharged in an out- patient basis.

If your patient discharged on an out- patient basis, please ask your doctor or nurse for advice before leaving emergency ward

when emergency doctor decides to hospitalize the patient after getting a biography, you maybe will be wait for the initial actions (venipuncture, take a blood sample for testing, Prescription needed medicines – perform radiography – register nursing report – co – ordinate with ward nurse – preparing beds for the patient and receipt him / her)
